PUBLIC SERVICE ANNOUNCEMENT

COVID-19 UPDATE: WELLAND TRANSIT CONTINUES SANITIZATION PROTOCOLS

Welland, ON - Since the onset of the COVID-19 pandemic, Welland Transit has made every effort to keep customers and staff safe from virus transmission. In addition to an extensive daily cleaning schedule, staff have been diligently wiping down all the high touch/contact surfaces with public health-approved sanitizing products. Further to these efforts, the second application of Aegis, an anti-microbial coating, was applied to the entire fleet this week.

The Aegis anti-microbial product is misted onto all surfaces and then wiped off. The material will coat every surface for an entire year, regardless of other cleaning measures undertaken. The anti-microbial agent protects everyone by not allowing any surface area to host a virus. This solution is applied by a trained team that works with all the Transit agencies throughout Ontario to ensure buses, trains, and streetcars are sanitized.

To ensure any possible future waves or variants are dealt with quickly, this second application will ensure the viruses are eliminated effectively for the community's continued safety.
